          <activity android:name=".MainActivity">
               <intent-filter>
```

Tell us about your Android project

Package Name

Your package name uniquely identifies your Android app. We use this to let people download your app from Google Play if they don't have it installed. You can find this in your Android Manifest

com.programandoando.hamp.androidfb

Default Activity Class Name

This is the fully qualified class name of the activity that handles deep linking. We use this when we deep link into your app from the Facebook app. You can also find this in your Android Manifest

com.programandoando.hamp.androidfb.MainActivity

Add your development and release key hashes

To ensure the authenticity of the interactions between your app and Facebook, you need to supply us with the Android key hash for your development environment. If your app has already been published, you should add your release key hash too.

Show how to generate a development key hash

If your app has already been published, you should also add a hash of your release key.

Show how to generate a release key hash

Key Hashes

Next

}

Now, when people install or engage with your app, you'll see this data reflected in your app's Insights dashboard.

Next Steps

Congratulations! You have added the Facebook SDK to your project. You are now in the next stage in integrating your app with Facebook. What do you want to do next? Skip to Developer Dashboard or Documentation

Share

Add the share dialog to let people share your content with their friends.

Login

Add Facebook Login to let people quickly and easily login to your app.

Ads

Grow your app with Facebook Ads for Apps.

Monetize

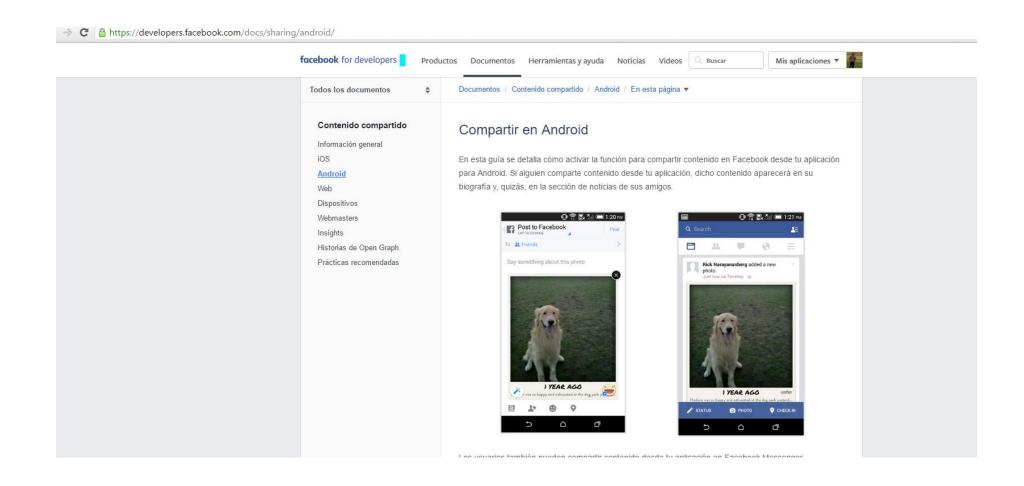

Monetize your mobile app with Facebook Ads.
